

CELL LINE THAT COMPRISES THE PROMOTER OF CYCLOOXYGENASE-2  
(COX-2) AND A REPORTER GENE, AND USE THEREOF IN THE  
SEARCH FOR SELECTIVE INHIBITORS OF THE TRANSCRIPTIONAL  
INDUCTION OF COX-2

5

ABSTRACT

The cell lines comprises a DNA construct that  
comprises all or part of a promoter sequence of the gene  
10 coding for cyclooxygenase 2 (cox-2) and a reporter gene,  
operatively joined to each other, such that said promoter  
sequence of the cox-2 gene controls the expression of  
said reporter gene in response to a suitable stimulus.

The assay method comprises bringing said cell line into  
15 contact with the compound to be assayed and determining  
the existence of a signal indicative of the expression of  
activity due to the reporter gene. This method is  
suitable for the induction at a transcriptional level of  
cox-2 by suitable stimuli.
